

## **Achieving 100% renewable electricity** <sup>[1]</sup>

**Publish Date:** 19 November 2020 11:18 CET

Novartis signed five virtual power purchase agreements (VPPAs), which are expected to collectively add 277 megawatts of clean power to the electrical grid. This move makes Novartis the first pharmaceutical company set to achieve 100% renewable electricity in its European operations. The projects are expected to address Novartis greenhouse gas emissions across its European operations, equivalent to removing approximately 113 000 passenger vehicles from the road annually.

“At Novartis, environmental sustainability is aligned with our purpose to reimagine medicine to improve and extend people’s lives,” said Montse Montaner, Chief Sustainability Officer at Novartis. “Energy efficiency and renewable energy solutions are the cornerstones of our strategy for reducing emissions. These agreements mark a major milestone on the Novartis environmental sustainability journey to be carbon neutral across its operations by 2025 and across its supply chain by 2030.”

## Becoming an environmentally sustainable business

We aim to drive sustainability through our own operations, as well as those of our suppliers, and we have set ambitious targets to minimize our impacts on climate, waste and water. We have already made significant progress. While Novartis Group sales have increased in the past years, our consumption of energy and water, as well as our greenhouse gas emissions, have declined.
