

Research Disease Areas ^[1]

We focus on discovering and advancing new treatments for serious patient needs. From the inception of a therapeutic through early clinical development, our disease area teams collaborate across scientific disciplines and organizations in support of our mission to improve and extend peoples' lives.

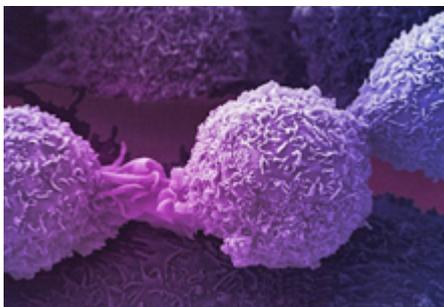

Immuno-oncology

Our Immuno-oncology research program aims to treat most human cancers with immune therapy.

[Learn More](#) ^[2]

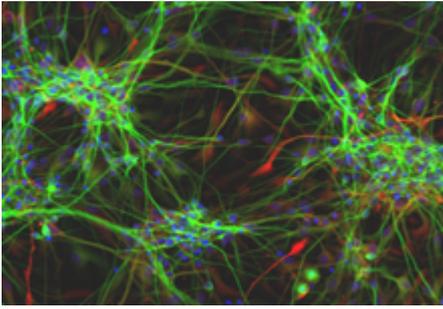

Oncology

Our Oncology group explores mechanisms and potential therapeutics for a wide range of both common and rare cancers.

[Learn More](#) ^[3]

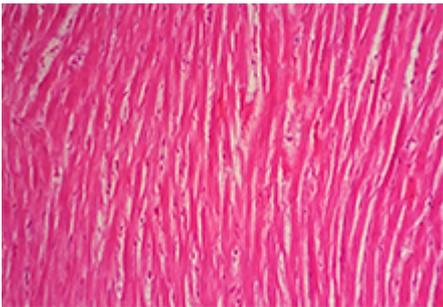

Neuroscience

Learn how our recent advances in model systems and technology help us pursue revolutionary therapies for neurodegenerative, neurodevelopmental and neuropsychiatric conditions.

[Learn More](#) [4]

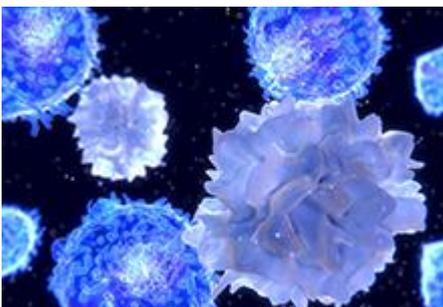

Cardiovascular & Metabolic Diseases

Concentrates on dyslipidemia, atherosclerosis and vascular diseases, type 2 diabetes, heart failure, cardiac arrhythmias and associated disorders.

[Learn More](#) [5]

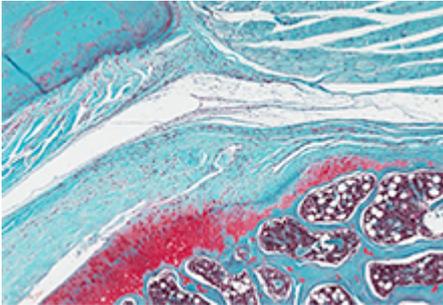

Autoimmunity, Transplantation & Inflammatory Disease

Pioneers novel therapeutic modalities for the treatment of rheumatic and dermatological diseases as well as other auto-immune and inflammatory conditions.

[Learn More](#) [6]

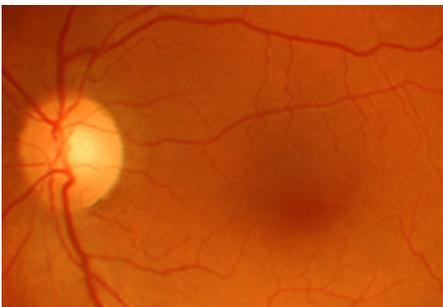

Musculoskeletal Diseases

The musculoskeletal disease research team focuses on discovering therapies for muscle wasting and bone disorders.

[Learn More](#) [7]

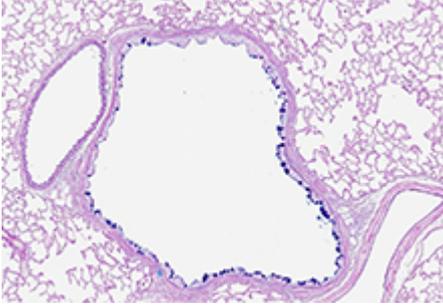

Ophthalmology

The ophthalmology team at NIBR is working on new scientific discoveries for eye disorders including age-related macular degeneration.

[Learn More](#) [8]

Respiratory Diseases

The respiratory research team focuses on the discovery and development of novel therapies for a broad range of respiratory diseases, from common to rare (genetic) diseases such as cystic fibrosis.

[Learn More](#) [9]

Tropical Diseases

The Novartis Institute for Tropical Diseases is a drug discovery research institute dedicated to finding novel treatments for neglected tropical diseases, including malaria, cryptosporidiosis, and three major kinetoplastid diseases – human African trypanosomiasis, Chagas disease, and leishmaniasis.
